WHY IT'S POWERFUL

The same threat intelligence used by companies and networks worldwide.

3,6M

threat signatures
updated every day by **Cisco Talos**, one of the world's largest cyber threat research centers.

1

Threats from every system

Detects viruses and malware for **Windows, Mac, Linux and Android**, plus infected Office documents and PDFs: you won't pass threats on to people using other systems.

2

Automatic fix

Fix recognizes the file type and acts on its own: it isolates infected apps, disables malicious startup items and never touches system files.

3

Fast on every core

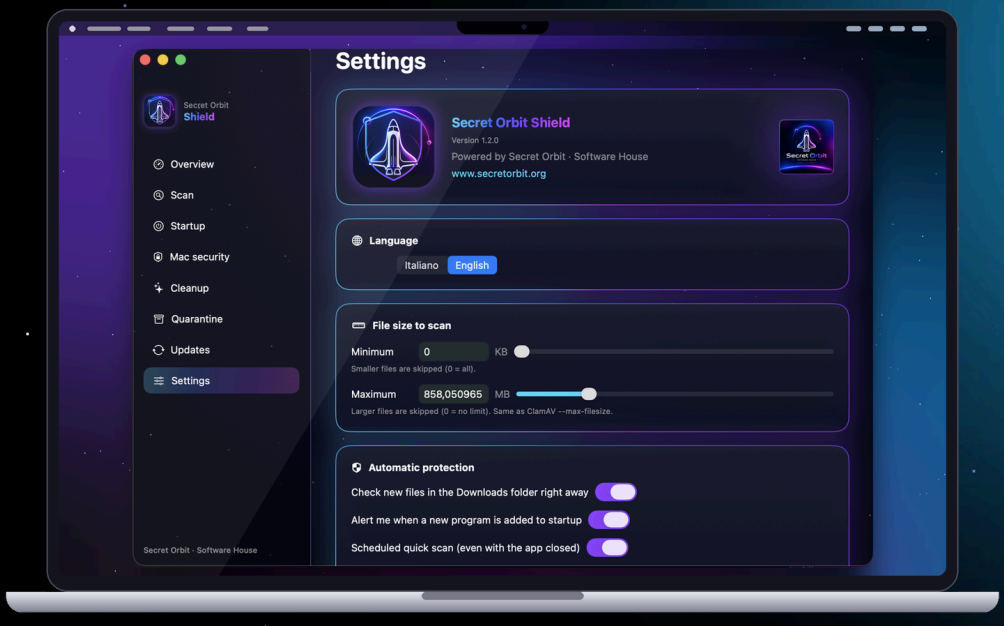

The engine works in parallel on every core and starts right away, even while still finding files: no long initial wait.

4

Everything stays on your computer

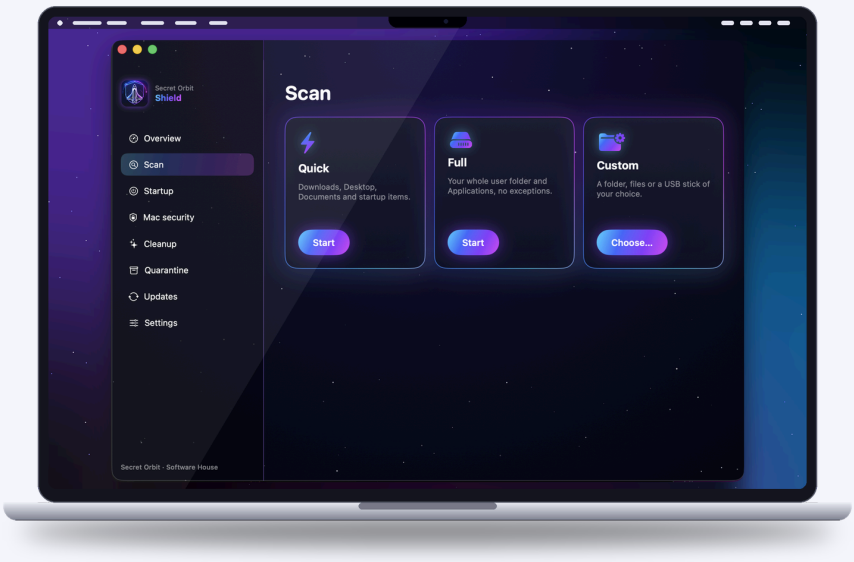

No file is sent to the cloud: scans run locally and stay private.

AUTOMATIC PROTECTION · DOWNLOADS · STARTUP · SCHEDULED SCAN

WHAT IT DOES

Scan. Fix. Clean.

01 · SCAN

Quick, full or custom

The riskiest folders in minutes, the whole computer with no exceptions, or a USB stick. Every threat is labeled by type.

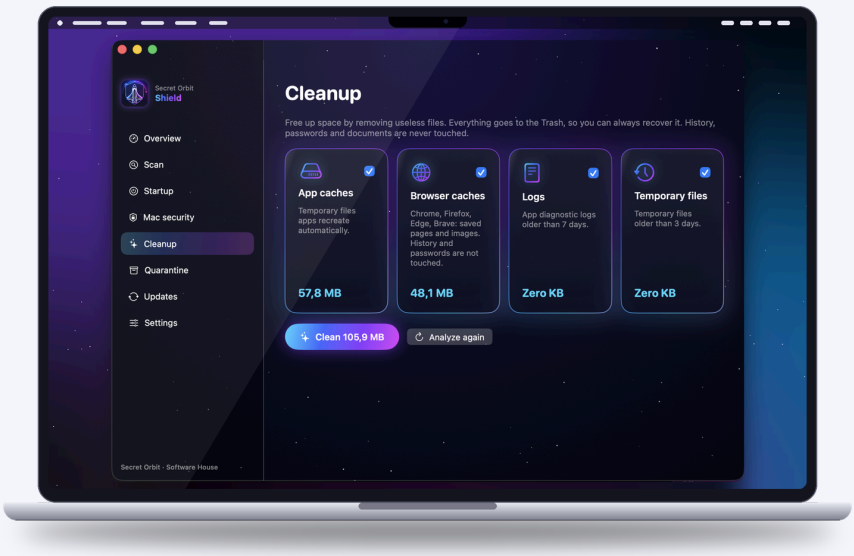

- Viruses, trojans, worms, spyware, ransomware
- Pause, resume and filters

02 · CLEANUP

Free up space in one click

Removes app and browser caches, logs and temporary files you no longer need. Everything goes to the Trash, so you can always recover it.

- History and passwords are never touched
- See the space before cleaning

One-click Fix

Isolates, disables and protects: reversible.

Download protection

Every downloaded file is checked right away.

Scheduled

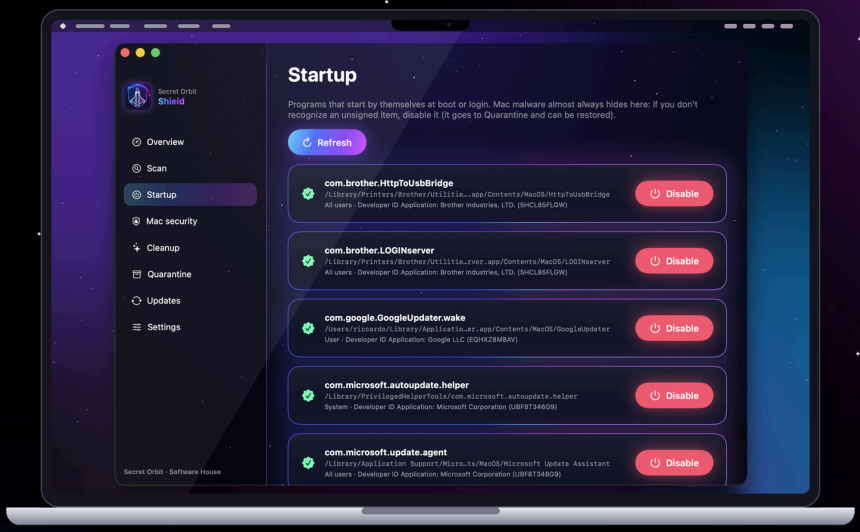

Pick the day and time, fully automatic.

Right-click

Scan any file from the Finder.

KEEP EVERYTHING UNDER CONTROL

See what starts on its own. Check your computer is safe.

03 · STARTUP

Watch what starts automatically

Malware almost always hides among programs that start on their own. Shield lists them with their signed publisher and alerts you when a new one appears.

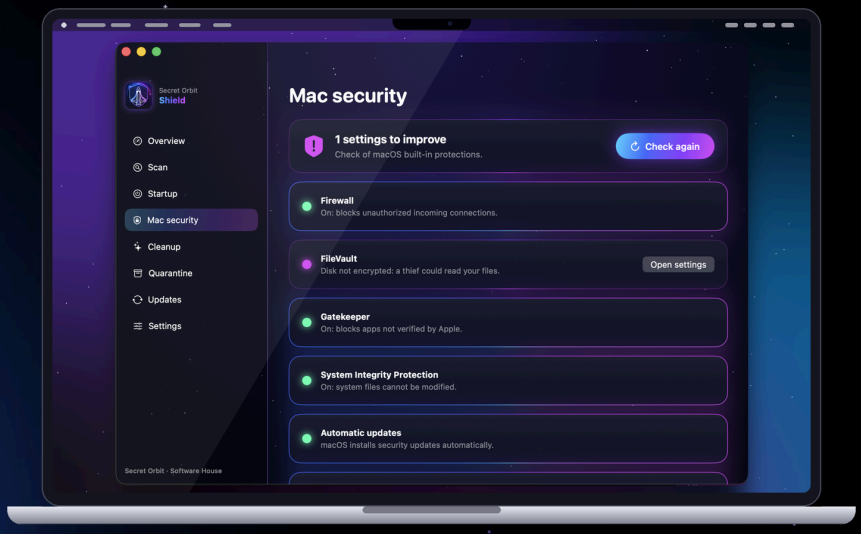

- Disable in one click
- Never lost: it goes to Quarantine

04 · COMPUTER SECURITY

A traffic light for your computer

Firewall, disk encryption, system protections, updates and remote access checked, with a button that takes you to the right setting.

- Green: all good
- Purple: needs attention

WORKS ALONGSIDE YOUR COMPUTER'S OWN PROTECTION

Shield doesn't replace or disable XProtect and Gatekeeper on Mac or Microsoft Defender on Windows: they always stay on. It's your **independent second check**, with signatures different from the system's.

ONE-TIME PAYMENT · LIFETIME LICENSE

Pay once. Protected forever.

No subscription and no renewals, signature updates included. For you or your whole team.

INDIVIDUALS

€ 5

+ 22% VAT · € 6.10 VAT included
